# Can I use MDX components? documentation

## *Release*

**Keystatic Demo Team**

## Table of Contents

1 Example 1

2 Things to keep in mind 1

Yes. Keystatic supports MDX out of the box, so you can embed React components directly in your content files.

## 1 Example

```
;This is a custom callout rendered from a React component.
```

## 2 Things to keep in mind

- Components must be importable from the content file's location.
- The MDX field in Keystatic gives editors a rich-text toolbar, but raw component syntax is preserved as-is.
- If you need structured data instead of freeform markup, consider using Keystatic's `fields.object` or `fields.blocks` instead of MDX components.
