2 What happens when an editor saves? 1

GitHub mode lets non-technical editors propose content changes through the Keystatic UI while keeping your repository as the single source of truth.

1 Setup

In `keystatic.config.ts`, set the storage kind to `github` and provide your repo:

```
storage: {
  kind: "github",
  repo: "owner/repo-name",
  branchPrefix: "content/",
}
```

2 What happens when an editor saves?

1. Keystatic creates a new branch prefixed with `content/`.
2. The content change is committed to that branch.
3. A pull request is opened against the default branch.
4. Your team reviews and merges the PR like any other code change.

This means every content edit goes through version control and can be rolled back at any time.
