v2.3.0 documentation

Release

Keystatic Demo Team

Table of Contents

1 Highlights 1

2 Breaking changes 1

3 Bug fixes 1

1 Highlights

- **Blocks field** — A new polymorphic array field that lets editors build pages from different block types (rich text, callouts, CTAs, embeds).
- **Conditional fields** — Fields can now change their schema based on a discriminant select, enabling template-style entry forms.
- **Multi-relationship field** — Reference multiple entries from another collection with optional length validation.

2 Breaking changes

- The `fields.document` field has been renamed to `fields.mdx`. A codemod is available: `npx @keystatic/codemods document-to-mdx`.

3 Bug fixes

- Array fields now preserve item order after drag-and-drop reordering.
- Fixed TypeScript types for the `fields.object` helper when used inside arrays.
